UX Case Study - WhatsApp 💬

🥅 Goal

The primary goal for this project are:

- To conduct an qualitative research on WhatsApp user.
- Propose effecient solution for their pain points.

📱 Brief + Hand-On

WhatsApp is an **messaging application**. It has more than **2+ billions users** across globe. Due to internet boom, people started to use the app because of it's free messaging cost. Though the current version of the application is solves the primary use case, there were also areas for improvements. These improvements could be done on existing experience also few other new features also could be introduced to improve the user experience.

🔬 Research Plan

Below is the itenary of the design process

- **Targeted Users** (Set Up)
- **User Interview Question**
- **Qualitative Research** (4 User)
- **Persona** (Creation)

- **Empathy Mapping** (Overview)
- **Pain Points** (Listing)
- **Solution**

🎯 User Group

WhatsApp has been used wide rage of users irrespective of age. Shown below is the data set of users using the app.

Age Group	Usage
18-34	31%
35-44	27%
45-64	20%
65+	11%

Based on the above four category, have picked **user** of age group **27, 38 & 58 years.**

📄 User Interview Questions

Below shared are the few prepared questionair for the user discussion.

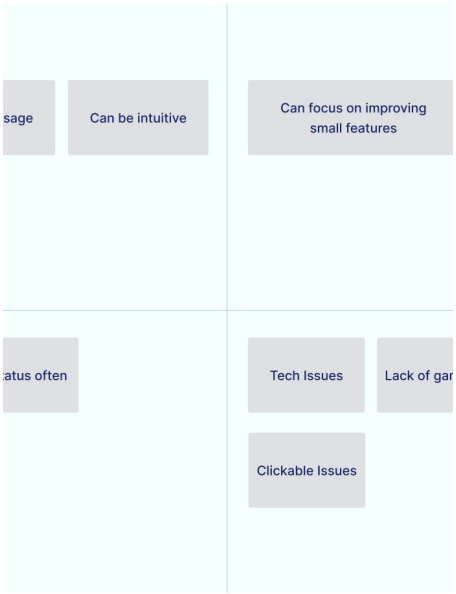

1. How frequently will you be using WhatsApp?
2. How do you feel while using the app?
3. What are the main things that you use WhatsApp for?

3. What are the main things that you use WhatsApp for?
4. Are you happy with current version?
5. Did you find any difficulties in using the app?
6. If so, can you explain them in detail?
7. Areas for the improvement?
8. Any add on or new suggestions?
9. What do you like about the app?
10. Do you use another app instead of WhatsApp?
11. If so, can you mention them?
12. How do you rate your experience in using WhatsApp?

🔍 Analysis

Based on the above listed of user interview questions created the **"Empathy Mapping"** to ideate the key findings from the user interview session.

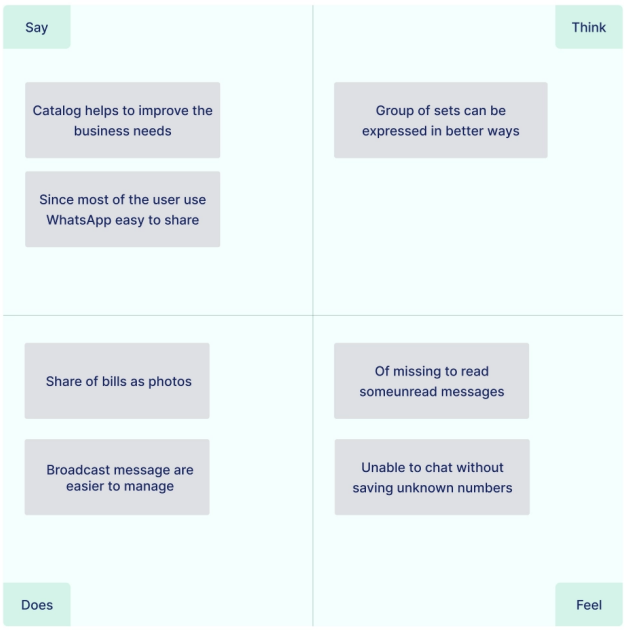

User 1️⃣

User 2️⃣

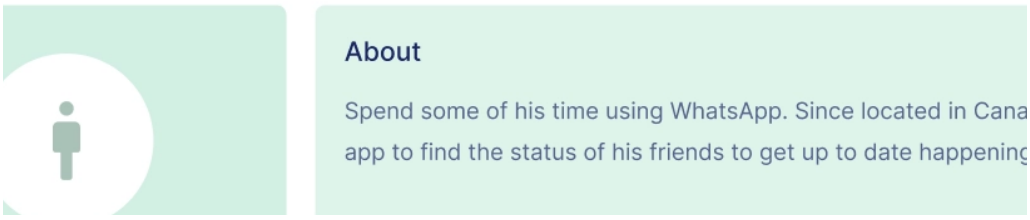

User 3️⃣

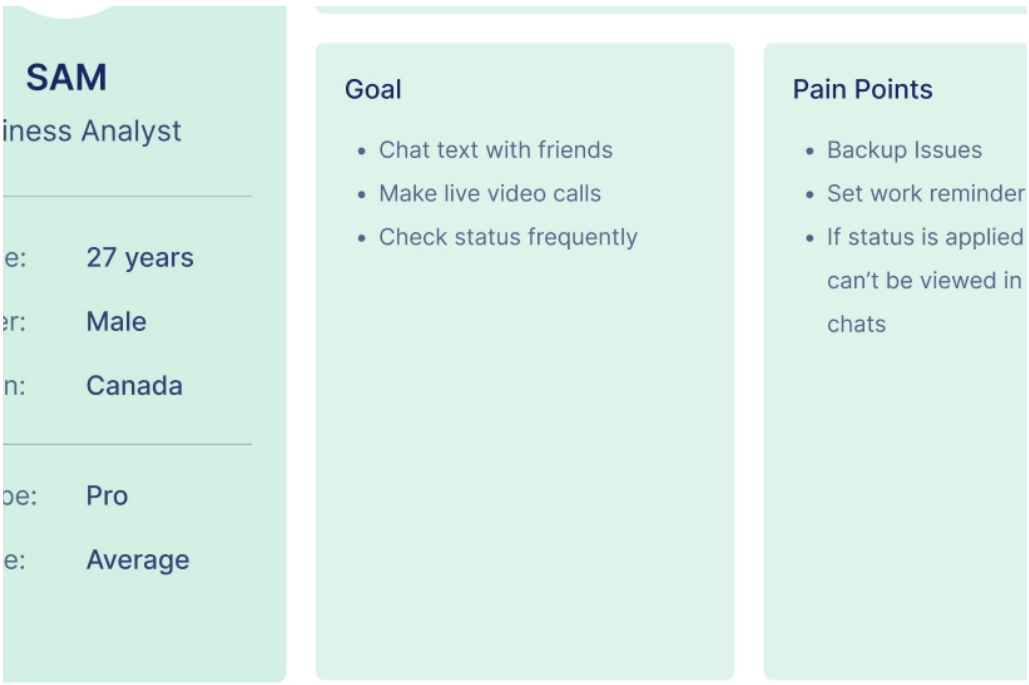

👽 Personas

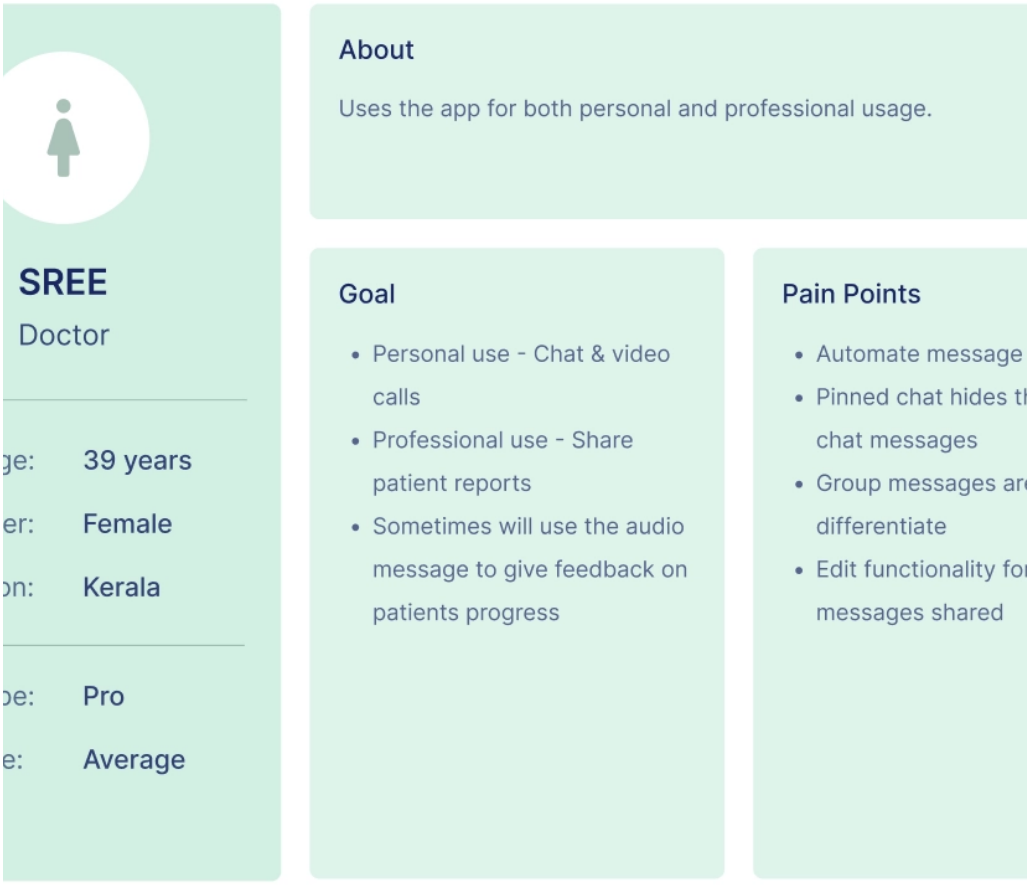

Based on the above drawn empathy mapping created personas for the 3 user types. Shared below are the documentation of the persona groups.

User 1️⃣

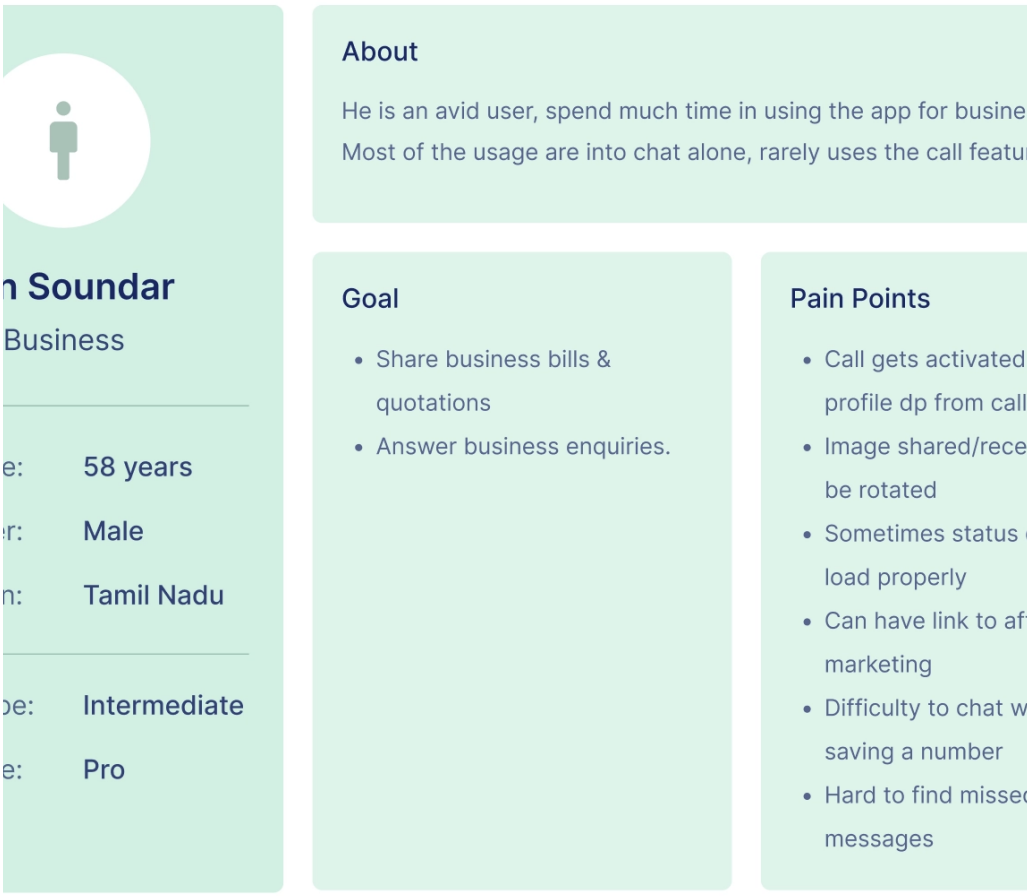

SAM
iness Analyst
e: 27 years
er: Male
n: Canada
pe: Pro
e: Average
Goal
Chat text with friends
Make live video calls
Check status frequently
Pain Points
Backup Issues
Set work reminder
If status is applied
can't be viewed in
chats

User 2️⃣

SREE
Doctor
ge: 39 years
er: Female
on: Kerala
pe: Pro
e: Average
About
Uses the app for both personal and professional usage.
Goal
Personal use - Chat & video calls
Professional use - Share patient reports
Sometimes will use the audio message to give feedback on patients progress
Pain Points
Automate message
Pinned chat hides t
chat messages
Group messages ar
differentiate
Edit functionality fo
messages shared

User 3️⃣

😩 Pain points

By using the above all collective pointers, started to list all possible functional pain points.

1. Clicking on profile dp from call tab, makes an call.

2. Backup doesn't function properly
3. Sometimes status can't be seen at a single click
4. Absence of rotate feature in image received
5. Edit can be added in voice message
6. Message unknown number without saving can be improved
7. If status applied then clicking on dp opens status instead of showing dp
8. If pinned chat are more then chance of seing other new message are lesser
9. Hard to differntiate group and individual messages
10. Unread message can be seen by filtering

Other Suggestions 💡

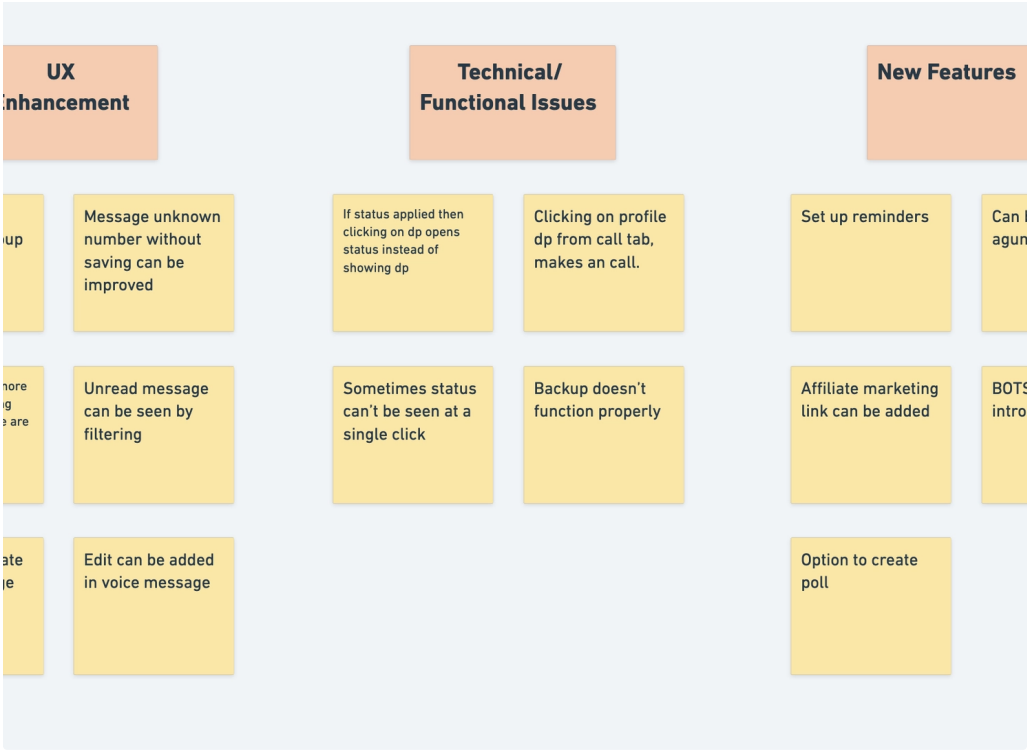

There we few other new suggestions provide to improve the experience. Few of them are listed as follow.

1. Set up reminders
2. Can bring in agumented reality
3. Affiliate marketing link can be added
4. BOTS can introduced
5. Option to create poll

💊 Solution

Started to bucket the pain points in to 3 categories:

- **UX Enhancement**
- **Technical/Functional Issues**
- **New Features**

Noted pain points are being grouped and arranged based on its similarities and its priorities.
